

We Are Open!

We are happy to see you and currently taking new patients!

We are still very cautious of this situation and we want to make sure that you feel comfortable and prepared before returning to our office. We want to assure you that we have always held ourselves to the highest standards of infection control and the new measures taken are implemented with care and

concern for you and our team. Below are measures we have taken to maximize infection control in our office in addition to our normal operating standards.

All patients will be asked to call upon arrival for their appointment and wait in their vehicle until a team member comes to greet you.

We will be limiting the number of patients seen in the office at one time

Every person entering the office will be screened for symptoms and have temperatures taken

The department of Public health requires all patients wear a mask (please bring one from home)

Please use Hand sanitizer upon entry and exit of the office.

Plexiglass barriers are installed around our reception area

Antiseptic mouth pre-rinse will be made available.

Our assistants and doctors may be wearing additional PPE depending on the type of procedure being performed (face shields, gowns, caps, etc.)

Your comfort, safety and well-being have always been a top priority. Our office follows infection control recommendations made by the American Dental Association (ADA), CDC and the Occupational Safety and Health Administration (OSHA). We follow the activities of these agencies so that we are implementing all new rulings or guidance that may be issued. We appreciate your assistance and understanding with following our updated guidelines to ensure safety for all. We look forward to welcoming you back!

Sincerely,

Veneman Dental Care
